

Portable Gas Flare

The Gasworks' Portable Gas Flare is used to safely flare the contents of LPG gas cylinders in vapour or liquid state.

Modular design and quick-connect fittings enable rapid setup, allowing flaring operation within minutes.

All Gasworks' Live Fire Devices are built to withstand extensive field use, ensuring reliability and cost-effective training.

Operational

Designed for ease of use, this lightweight and portable system sets up and packs down in minutes. Optional accessories include a carry case, adaptors, and an extension hose that provides added convenience.

Safety

Purging and flaring can be safely conducted from a distance with a pilot-operated flare. For added flexibility, an optional extension hose is available to increase the safe operating range.

Quality

Built tough with high-quality components to meet the demands of first responders. The sturdy tripod ensures stability on both flat and uneven terrain.

Specifications

Width: 2.4 metres

Height: 2.9 metres

Device Weight: 13 kilograms

Boxed Weight: 44 kilograms

Gas Supply: LPG cylinders
